**CATCH THE BEAT**

Practical AI for Local Governments

GITLAXT'AAMIKS VILLAGE GOVERNMENT / CASE STUDY

# Stronger governance. Knowledge that stays.

An ongoing partnership is turning manual Council administration into shared workflows, with full knowledge transfer to the internal team underway.

## 01 STARTING POINT

A full-day audit of the Corporate Clerk's meeting workflow identified 15 gaps. Paper binders, handwritten minutes that needed retyping, manual follow-up and records held on one desktop created extra work and reliance on individual staff knowledge.

## 02 PROCESS

CTB mapped the workflow, then developed governance guidance, a SharePoint motion tracker, Power Automate workflows and a Power BI dashboard. Records planning added filing standards, training resources and an architecture designed to respect Indigenous data sovereignty and cultural access protocols.

## 03 END POINT TO DATE

The governance pilot has been built and tested, with tools for tracking Council decisions, reminders and reporting. Full knowledge transfer is ongoing so the internal team can operate and maintain the systems. Wider records rollout and department-by-department modernization remain next steps.

**20.6**
hours saved per meeting cycle

**247**
projected hours saved annually

**~31**
eight-hour staff days per year

Projected capacity gains from the progress deck's workflow model, not verified time savings achieved to date. Calculation and scope on page 2.

**Build the tools. Grow the skills. Keep the knowledge.**

# The value continues with the internal team.

## A CLEARER VIEW OF TIME SAVED

The progress deck compares an observed manual workflow with a digital-first model. Its estimate is 22.3 hours before and 1.7 hours after per meeting cycle, a difference of 20.6 hours.

At 12 meeting cycles per year, that is 247.2 hours, rounded to 247 hours, or about 31 eight-hour staff days. The 12-cycle assumption reconciles the deck’s annual projection. This represents potential staff capacity, not verified payroll savings.

Realized savings depend on adoption, workflow reliability and ongoing upkeep. Separate setup, training and maintenance allowances are not identified in the source estimate. The earlier strategy’s reduction targets are not presented here as achieved results.

## KNOWLEDGE TRANSFER IS THE CURRENT PRIORITY

The engagement continues with full knowledge transfer to the internal team. The progress deck identifies Monica Morven as the lead and sets out training on SharePoint, Power Automate and Power BI, supported by documentation and build guides. Its planned handover period runs through January 2027.

The wider records package includes draft policy, a phased action plan, SharePoint architecture and staff training resources. It provides for general, confidential, Indigenous Knowledge and archival records. Those proposed standards and wider rollout remain distinct from the built governance pilot.

---

## “Your sessions proved there is so much work that can be done with AI”
