CATCH THE BEAT

Practical AI for Local Governments

DISTRICT OF LOGAN LAKE / CASE STUDY

Practical tools for everyday municipal work

From policy and privacy to bylaw tracking and operations, CTB created tools and guidance to support the District's day-to-day work.

01 STARTING POINT

The District's work spanned elections, records, privacy, policies and facility operations. Priorities included updating guidance, reducing manual tracking, organizing scattered operational material and giving staff practical ways to use AI.

02 PROCESS

CTB combined process discovery with document development, Microsoft 365 assistants and automation. We rebuilt the privacy program, prepared policy and records bylaw drafts, compared records platforms, and built and tested a bylaw tracking workflow. We also created election communications, onboarding resources and staff maintenance guides.

03 END POINT

The District received a coordinated set of municipal resources: a tested workflow that reads signed bylaw PDFs, updates a register and notifies staff; a Council resolution tracker and search agent; six core AI assistants; and a five-volume draft package for Meadow Creek operations. Training and technical guides support ongoing staff ownership.

86–153
potential drafting hours avoided

83
potential hours saved per year

~11
staff days per year at 7.5 hours

Illustrative estimates, not measured results. Assumptions and limits on page 2.

At close-out: policy adoption and operational review remained with the District. Staff training was still scheduled; complete resolution searches depend on all approved minutes being filed.

What could work better in your local government?

Let's turn your next priority into practical tools your team can use.

DISTRICT OF LOGAN LAKE / ESTIMATED VALUE

More time for municipal work

Planning estimates based on explicit assumptions

These scenarios use the report’s deliverable counts and assumed task times. The District has not validated the times, workload volumes or usage. Actual time saved to date has not been measured.

ONE-TIME DOCUMENT PREPARATION

Potential staff drafting effort avoided: 86–153 hours

If staff would otherwise have prepared equivalent Meadow Creek drafts internally, the delivered package could avoid the following initial drafting effort:

35 operating procedures	1–2 hours each	**35–70 hours**
26 printable forms	0.5–1 hour each	**13–26 hours**
13 governing policies	2–3 hours each	**26–39 hours**
3 handbooks	4–6 hours each	**12–18 hours**

Assumes usable source material and simple drafts, with handbooks reusing the SOP content. Excludes District review, adoption and revisions. This is potential staff effort avoided, not net project savings. CTB recorded 117 hours across the full engagement, a broader scope than these documents.

RECURRING TIME AFTER ROLLOUT

Routine information and drafting	3 staff × 0.5 hr × 46 weeks	**69 hours**
Bylaw register updates	24 bylaws × 20 min saved	**8 hours**
Council resolution searches	24 searches × 15 min saved	**6 hours**

Potential annual total: 83 hours, or about 11 staff days.

Assumes regular use, complete source records and time savings after human checks. Routine tasks exclude the bylaw and resolution tasks counted separately. Figures are gross capacity estimates before training and system maintenance, not payroll savings. One-time and annual figures are not added together.

Practical tools. Clear ownership. More time for the work.
