CATCH THE BEAT

Practical AI for Local Governments

DISTRICT OF PORT EDWARD / CASE STUDY

A new team. A stronger foundation.

After 100% administrative staff turnover, including senior leadership, Port Edward needed practical support to rebuild capacity and continuity.

01 STARTING POINT

Two newly hired staff had no prior municipal experience. The loss of institutional knowledge created an urgent need to shorten the learning curve, manage administrative tasks, support decisions and overcome language barriers while keeping municipal work moving.

02 PROCESS

CTB introduced AI and cloud-based tools for onboarding, project tracking, scheduling, agendas, minutes and electronic signatures. WorkHub, Monday.com, Calendly and Diligent Community supported these processes. Scribe captured procedures, ChatGPT supported communication, and NetPhone supported telecommunications.

03 END POINT

The original case study reports faster onboarding, increased staff capacity, automated internal processes and stronger confidence in municipal systems. Documented procedures and shared project tools supported continuity, while the work also strengthened public transparency, records practices and budget control.

~80 HOURS PER YEAR

Illustrative potential time savings for two staff

Assume each staff member saves 1 hour a week across the combined workflows over 46 weeks: 92 hours. Allow 12 hours annually for upkeep, leaving 80 hours, or about 11 staff days of 7.5 hours.

Scenario only, not measured results. Assumes regular use and human review. Excludes initial setup and training. Actual savings and upkeep will vary; no dollar savings are verified.

Help your next hire start with a stronger foundation.
