**CATCH THE BEAT**

Practical AI for Local Governments

DISTRICT OF TUMBLER RIDGE / CASE STUDY

# Practical AI. Clear governance.

From January to April 2026, CTB developed practical systems, governance tools and staff resources to support the District's daily work.

## 01 STARTING POINT

The District wanted to strengthen privacy, records and digital governance while meeting immediate election and communications needs. The project combined that longer-term foundation with practical tools for tracking bylaws, policies and contracts.

## 02 PROCESS

CTB reviewed the privacy program, developed governance guidance, built bylaw and policy indexes in Zoho Creator, and created an Excel contract register. We also prepared election resources, records migration groundwork and tailored Copilot agents, alongside hands-on training.

## 03 END POINT

The District received centralized tracking tools, privacy assessment resources and agents covering seven areas of municipal work. Governance checklists and an agent maintenance manual give staff a repeatable approach to using and maintaining the tools. Actual time savings were not measured in the report.

## ~80 HOURS PER YEAR

**Illustrative potential time savings after regular adoption**

Assume 4 staff each save 30 minutes a week across searches, tracking and drafting over 46 weeks: 92 hours. Allow 12 hours annually for maintenance, leaving 80 hours, or about 11 staff days of 7.5 hours.

Scenario only, not measured results. Staff numbers, usage and maintenance time are assumed. Savings allow for human checks but exclude setup and training. Ongoing upkeep may vary.

**Make your next digital step a practical one.**

Let's connect your municipal priorities with tools staff can use.
