To whom it may concern,

The District of Kitimat recently engaged Daphne Thomson to deliver an introductory training session on Artificial Intelligence for our staff. The session was thoughtfully prepared and included a training workbook, a short quiz for learning reinforcement, and clear record-keeping of attendance.

The training provided our team with a practical introduction to AI and how it is increasingly being used within local government environments. Key topics included an overview of what AI is, privacy and security considerations when using AI tools, legal responsibilities and potential risks, ownership of AI-assisted documents and content, and the importance of critical thinking when working with AI systems.

Daphne also demonstrated practical examples using Microsoft Copilot and explained the differences between enterprise AI tools and publicly available free tools. The session was well structured, accessible to staff at different levels of familiarity with the technology, and grounded in the realities of municipal operations.

The training helped our team better understand both the opportunities and responsibilities associated with emerging AI tools, and it was presented in a clear and practical manner.
We would recommend Daphne Thomson without hesitation to other local governments seeking guidance or training on the responsible and practical use of artificial intelligence.

Sincerely,

Sue-Lin Tarnowski, BSc., CPA
Director of Finance
