To Whom It May Concern:

RE: Letter of Recommendation for Daphne Thomson, Catch the Beat AI Inc

Woodlands County is pleased to recommend Daphne Thomson, founder of Catch the Beat AI Inc. Daphne worked with our team to develop practical artificial intelligence and Microsoft 365 solutions that support governance, records management, Council reporting, and everyday administrative work. Daphne created an automated Council Motion and Resolution Tracker that captures resolutions and assigned actions from approved Council minutes. The system allows staff to monitor responsibilities, update progress, identify outstanding items, and prepare clear reports for Council.

She also completed a detailed reconciliation of the County's policy records using three sources: the existing policy registry, historical Council minutes dating back to 1999, and policy documents stored in County folders. This work identified missing, active, rescinded, and unverified policies and brought the information together into one reliable source.

Daphne then developed an automated policy management system in SharePoint. The system updates the policy registry when approved policies are added, supports the archiving of rescinded policies, and provides staff notifications. An artificial intelligence assistant was also created to help staff search active policies using plain language.

In addition, Daphne developed customized artificial intelligence tools to assist with Council minutes and Requests for Decision. She provided manuals, implementation guides, workflow instructions, training materials, and a staff workbook to support the continued use of each system.

Daphne also delivered friendly and practical online training to the Woodlands County team. She introduced staff to artificial intelligence, explained free and paid platforms, reviewed leading tools, and demonstrated how artificial intelligence can support municipal work. Her ability to explain technical concepts in a clear and approachable way helped staff feel comfortable using the new systems.

Daphne brought a valuable combination of municipal experience, technical knowledge, patience, and creativity to this project. She took the time to understand our needs and delivered working solutions that staff can use in their daily roles.

We are happy to recommend Daphne Thomson and Catch the Beat AI Inc to any municipality or public sector organization seeking assistance with artificial intelligence, governance systems, administrative automation, records management, or staff training. We would confidently recommend her services to others.

Sincerely,
Matthew Ferris
Chief Administrative Officer
Woodlands County
